Ecolighten & Energent announce agreement for Energy Management solutions

Vancouver, BC. – Ecolighten Energy Solutions Ltd. (Ecolighten) is pleased to announce a channel partnership with Energent Incorporated (Energent). Ecolighten will represent Energent in Western Canada and the US Pacific Northwest, by providing Energent's integrated suite of class-leading Energy Management Information System (EMIS) software applications that pinpoint inefficiencies and eliminate energy waste while significantly reducing carbon footprint and operating costs in industrial, commercial and retail buildings.

Optimization of electricity and other primary energy sources is a major focus for any business these days. Over time, the systems controlling these facilities can be off the mark with respect to optimal energy utilization, thus more energy than should be is used to satisfy heating, cooling, lighting and other key energy requirements. Combine this fact with continuously rising energy costs and one can understand why businesses are looking for a new approach to energy management and conservation in their facilities. Through its EMIS platform, Energent is on the cutting edge of energy management with a combination of leading edge software and experienced, knowledgeable service and support.

"We're pleased to partner with Energent to foster growth in the Pacific Northwest of their 'real time' energy management solution" says Ryan Coleman, Founder / CEO of Ecolighten. "There is no question that businesses are looking for tools that can provide valuable and timely insights into energy usage and we believe Energent has the right solution, both innovative and unique, that will deliver real energy savings for clients."

"In British Columbia and the US Pacific Northwest, there is no question that there is a strong focus on conservation and demand management, as well as a regional move towards smart metering and smart grid development. This will only drive greater awareness and the need for our best in class energy management solutions" adds Chris Reid, President and CEO of Energent. "We are very pleased to have Ecolighten join the Energent team leveraging their experience and expertise to support our growth in this region. We look forward to delivering on the shared goals of energy-efficiency and sustainability of the utilities and our clients."

Ecolighten will be providing strategic business development for Energent across a number of sectors and markets in British Columbia, Alberta, Oregon, Washington, and California.
